

## Disinfect water and water distribution systems quickly and simply.

### Cidox Disinfection on Demand

Cidox tablets provide fast, efficient disinfection of water, tanks and water distribution systems, without the need for hazardous chemicals or messy manual mixing.

#### HOW?

Add tablets to your water to achieve the target Chlorine Dioxide concentration. Let the tablets activate, then flush through pipework if necessary, before disposing of in usual mains drainage.

In large tanks, partially empty tank and add Cidox tablets to create target concentration. Either flush through pipework and dispose, or refill tank. If the tank is refilled, the residual Chlorine Dioxide will disinfect the upper part of the tank.

#### WHY CHLORINE DIOXIDE?

It's the best biocide for rapid kill of bacteria, fungi and spores, without corroding the water system in the process. There's no transportation or mixing of hazardous chemicals, just add tablets and leave until activated to create Chlorine Dioxide at the appropriate strength.

Residual Chlorine Dioxide solution can be diluted to a level safe for consumption or disposed of using mains drainage. There is no requirement for specialist disposal of disinfectant solutions, unlike some other biocides.

#### WHY SCOTMAS?

Unlike most of our competitors, Chlorine Dioxide is not a part of what we do or an 'add on' to our range. We are Chlorine Dioxide specialists, focused on Chlorine Dioxide technologies and applications, from the smallest tablet to our largest Generation Systems.
