

## Unique water sanitation and microflora enhancement program

### Floradox Unrivalled Flock Performance

Trials with Ross 308 broilers on the Scotmas Floradox performance program in conjunction with a Biox water sanitation plan:

- Significant performance improvement over traditional stand-alone acidification and sanitation methods.
- Remarkable increase in bodyweight up to 42 days, yielding an impressive 100 gram+ benefit per bird up to 42 days.
- Better flock health with no antibiotic intervention. Mortality rates up to 10% lower than controls (2.16%) with no antibiotic intervention.
- Overall results - reduced slaughter age, faster growth, superior FCR and increased farm to plate production of Grade A birds.

### WATER SANITATION

Ten times more powerful part for part than Hydrogen Peroxide, Biox 500 eliminates biofilm quicker than any other product:

- Removes organic bound biofilm including lime scale, iron and manganese.
  - Significantly improves palatability due to better taste and odour, maximising food intake.
- Non corrosive, no mixing or dilution, reduced leakage.
- No breathable hazards or potential injury from chemical burns.

### MICROFLORA ENHANCEMENT

A unique blend of organic acids designed to stimulate activity in the major target zones of the gastrointestinal tract:

- Does not rely on pH adjustments, unlike conventional acid treatments.
- Enhancement evolves through competitive exclusion of pathogenic and invasive bacteria.
- Lower antibiotic, vitamin and supplement regimes.
  - Higher immune response to vaccination.
- Improves epithelial cell growth, increases surface area for nutrient transfer and maximises nutrient values.
